Breaking Code E: The 1859 Telegraph Code of Napoleon III and Empress Eugénie

J.A with the help of GPT 6 Astra and a little bit of help from Opus 5.5 ·
Oct 11, 2026

Abstract

We recover most of the codebook of "code E", the private numeric telegraph code used between Napoleon III, on campaign in Italy, and Empress Eugénie, regent in Paris, in June 1859. The enciphered telegrams survive in Bibliothèque nationale de France, NAF 11355, without a key. As far as we can determine, their content has not been published before.

Code E is a one-part code of roughly 1,450 numbered entries. It covers whole words plus a syllabary of letters and syllables, which the clerks used to spell names and inflections. Its alphabetical ordering lets every proposed reading be checked against its neighbours.

Using that ordering constraint, a French language model built from period correspondence, and iterative hypothesis testing by AI agents, we assign readings to 232 code groups. These cover about 94% of the group tokens in twelve telegrams. Each reading carries an explicit confidence tier.

The decrypts include a personal exchange: Eugénie apologises for a hurtful message and reports on their son. The telegrams also include:

- the Emperor's political statement of 19 June on the Pope, the Legations and Piedmont;
- an instruction concerning the *Journal militaire*;
- an account, written on 23 June, of the sudden death of the Emperor's aide-de-camp General de Cotte.

That death is independently recorded by Bazancourt (1860).

1 Introduction

In May 1859 Napoleon III left Paris to command the Franco-Sardinian army against Austria. He left Empress Eugénie as regent. Through the campaign the couple exchanged frequent telegrams. Most were in clear, but private or sensitive sentences were put into a numeric code that the telegraph copies label "E".

Copies survive in a BnF volume of 1859 telegraph traffic. The code-E telegrams run from about 1 June to 25 June: from the crossing of the Ticino, through Milan and the pursuit to the Mincio, to Solferino on 24 June. The coded passages are interleaved with clear text, so

each telegram presents a short run of numbers with plain French context on both sides.

This paper makes three contributions:

1. A description of the code's structure: a one-part alphabetical book of words that also contains a syllabary, so names and inflections are spelled out syllable by syllable.
2. A recovered key of 232 groups with confidence tiers, reading 422 of the 447 coded text tokens (94.4%).
3. Reconstructed French text and English translation of all twelve code-E telegrams, with the unread groups marked.

Throughout, we keep three things distinct: what the manuscript shows, what the key reads with confidence, and what is inferred.

2 The source: BnF NAF 11355

The material is Bibliothèque nationale de France, Nouvelles acquisitions françaises 11355, digitised on Gallica. It holds telegraph-office copies of June 1859 dispatches and was given to the BnF in 1916.

The volume mixes several codes, including War Ministry, Prince Napoléon and Sardinian traffic. Only the Emperor–Empress exchange uses code E. We treat code E alone.

Folio	Date (1859)	Direction	Place	Coded tokens	Read	Header
f3	c. 1 June	Emperor → Empress	Alessandria	5	5	—
f5	3 June	Emperor → Empress	Novara	7	0	—
f9	9 June	Emperor → Empress	Milan	59	58	—
f15	16 June	Emperor → Empress	Covo (via Chiari)	39	39	753
f17	17 June	Emperor → Empress	Travagliato	28	28	1098
f18	18 June	Emperor → Empress	Brescia	19	19	504
f19	19 June	Emperor → Empress	Brescia	70	66	302
f27	23 June	Empress → Emperor	Saint-Cloud	30	30	—
f29	23 June	Emperor → Empress	Montechiaro	131	125	163-455
f30	24 June	Empress → Emperor	Saint-Cloud	32	28	—
f32	24 June	Emperor → Empress	Cavriana	7	4	163-725
f35	25 June	Emperor → Empress	Cavriana	20	20	163-725
Total				**447**	**422**	

Every group was transcribed by hand from Gallica's high-resolution images: 457 code tokens in all, 10 of them header groups. A few readings of the manuscript are uncertain. Group 1210 in f9 is unclear. In f30 a clerk rewrote 1240 as 1440. Each group in the de Cotte sentence (§7) was re-checked on the image.

3 Structure of code E

Code E is a one-part code: group numbers rise with the alphabetical order of the plaintext. The book has roughly 1,450 entries. The highest group seen is 1396 (*z*).

3.1 Alphabetical order

A few high-frequency anchors fix the order:

Group	Reading	Group	Reading
30	à	926	pas
323	de	1040	que
702	la	1162	se
708	le	1385	vous
717	les		

The gap between *la* (702) and *le* (708) was the first clue. A clerk's correction of 702 to 708 in the manuscript confirmed it. The order gives a hard test: a reading for group *g* must sort between the readings of the nearest known groups below and above *g*. The final key has no order violations among groups of 30 and above.

3.2 A syllabary inside the word list

Letters and syllables are filed among the words in alphabetical order: *o* (868), *g* (548), *li* (721), *ti* (1265), *re* (1074), *ment* (783), *tion* (1274), *se* (1162), *z* (1396). Anything not in the book is spelled from these pieces:

Spelled form	Groups	Meaning
O-G-LI-O	868 548 721 868	l'Oglio
MIN-CI-O	796 237 868	le Mincio
LO-NA-TO	732 826 1278	Lonato

Spelled form	Groups	Meaning
CAS-TI-GL-I-ON	195 1265 563 608 888	Castiglione
MA-GEN-TA	748 553 1241	Magenta
CO-T-TE	248 1240 1249	de Cotte
EM-BRA-SE	425 172 1162	(t')embrasse

Endings are added the same way: INQUIÉT-Z (*inquiétez*), FA-TI-GUE, RE-TI-RE (*retiré*). The encoders also spelled by sound, taking whatever pieces lay near: DES-OL-LE for *désolée*, MER-VEILLE for *merveille*, ME-LE for *mêle*, PRÊ-TRÈS for *prêtres*.

3.3 The 3 groups and headers

Some groups carry a 3-like suffix mark. 103 and 263 act as full stops. Four others never fit the main alphabetical order and always stand where a proper name is expected:

- 3293: autrichien(ne)
- 9803: Piémont
- 10473: Rome
- 11023: Sardaigne

We infer a separate list of names, but this is not proven. Header groups (753, 1098, 504, 302, 163-455, 163-725) open several telegrams and are not part of the text. 163-725 heads both Solferino telegrams.

4 Method

The break combined a hard ordering constraint with a soft language-model score. Hypotheses were proposed and checked by AI agents working in parallel rounds, and the results were merged by hand.

1. **Transcription.** All 457 code tokens were transcribed from the Gallica images, with each telegram's clear text kept as context.
2. **One-part diagnosis.** Group frequencies, the *la*|*le* gap and the 702→708 correction showed that numbers follow alphabetical order.
3. **Anchors and brackets.** High-confidence anchors (*à*, *de*, *la*, *le*, *les*, *que*, *vous*) split the number line into brackets. Every candidate reading for a group had to sort inside its bracket.
4. **Language model.** A trigram model with Kneser-Ney smoothing was trained on about 3 million words of 19th-century French: Napoleon I's correspondence, campaign histories and the published Tuileries papers. It ranked candidate segmentations. On its own it

could not solve the code.

5. **The syllabary.** The decisive step was seeing place names spelled in pieces (O-G-LI-O, MIN-CI-O). Once single letters and syllables were admitted as entries, groups that had resisted word readings fell into place, and endings and odd spellings became readable.
6. **Parallel rounds.** In each round, agents took a subset of telegrams and proposed readings. Each reading came with bracket checks, a cross-occurrence check (does the same group read sensibly everywhere it appears?) and a confidence level. Merged keys were re-rendered across all telegrams and any order violation was rejected.
7. **External check.** After the de Cotte sentence was decoded (with the name only partly read), contemporary printed accounts were searched for a sudden death at headquarters that night (§7).

All tooling was scripted. A renderer applies the key to every telegram and reports order violations. A predictor lists the plausible code number for any French word given the current anchors.

5 Results: coverage and confidence tiers

The recovered key assigns readings to 232 distinct groups and reads 422 of 447 coded text tokens (94.4%). Twenty-five tokens (22 distinct groups) remain unread. Each group is rated on its own evidence:

Tier	Criterion	Groups
Confirmed	Fits order and sense in two or more independent contexts, or lies in the externally confirmed passage	68
Probable	Fits order and sense in one context	149
Tentative	Plausible, but weakly constrained	15
Total		**232**

A sentence can be more secure than its single-use groups. For example, *il faut y regard-er à 2 fois* is a fixed phrase in which every group must fit at once. Groups below 30 (digits and signs) sit outside the word list, so order cannot test them. 1 and 2 are read as the numerals *une* and *deux*.

The only order "violations" the renderer reports are between those sub-30 groups (1, 2, 10), which are not part of the alphabetical list. For every group numbered 30 and above, the order holds without exception.

6 The telegrams read

The reconstructed text uses these conventions:

- **Bold** marks text decoded from code groups; roman type is clear text in the original.
- *Italic* marks an inferred or tentative reading.
- [n] marks an unread group.

Spelled-out words are joined silently. Long clear-text passages are abridged with …

f3 · c. 1 June · Alessandria (Emperor → Empress)

> Rien de nouveau ce matin, les choses vont bien. **Je t'em-bra-sse.** Au revoir.

Nothing new this morning; things are going well. I kiss you. Goodbye.

f5 · 3 June · Novara (Emperor → Empress)

> [865] [442] [163] [824] [204] [543] [225] J'ai jeté trois ponts sur le Tessin…

The seven opening groups are unread. The rest of the telegram is in clear: bridges over the Ticino, a combat at the bridgehead, and General Auger capturing a gun.

f9 · 9 June · Milan (Emperor → Empress)

> Aujourd'hui Te Deum au Dôme… la garde impériale formait la haie. **En *sortant* [85] avec le roi, tous les prêtres m'ont baisé les mains, les femmes s'agenouillaient, les hommes étaient exaltés au-delà de toute expression, toutes les troupes étaient couvertes de fleurs. Mais nous avons de la peine à trouver du pain.**

Coming out […] with the King, all the priests kissed my hands, the women knelt, the men were exalted beyond all expression, all the troops were covered in flowers. But we are having trouble finding bread.

f15 · 16 June · Covo (Emperor → Empress)

> **L'armée aura passé aujourd'hui l'Oglio sans résistance. Nous suivons l'armée autrichienne pas à pas. *Je recueille partout des doléances relatives aux exactions commises* par l'ennemi.** Je vais bien. Au revoir.

The army will have crossed the Oglio today without resistance. We are following the Austrian army step by step. Proposed: everywhere I am receiving complaints about abuses committed by the enemy. Several groups in that sentence occur only here. The reading fits the key and the code's spelling habits (DO-LÉ-ANCES, EXACT-IONS), but it needs confirmation.

f17 · 17 June · Travagliato (Emperor → Empress)

> Je couche ce soir à Travagliato. **Nous espérons [1325] [751] sur la Chiese. Mais l'ennemi paraît décidément se retirer derrière le Mincio.** L'état moral et physique de l'armée est excellent.

We hope to be [tomorrow?] on the Chiese. But the enemy seems decidedly to be withdrawing behind the Mincio.

f18 · 18 June · Brescia (Emperor → Empress)

> L'armée est arrivée à Brescia. Nous ne savons pas encore **si les Autrichiens défendront les positions de Lonato et de Castiglione.** Tout va bien.

We do not yet know whether the Austrians will defend the positions of Lonato and Castiglione.

f19 · 19 June · Brescia (Emperor → Empress)

> Je suis bien **peiné** au milieu de mes travaux d'avoir à **répondre** à toutes les **[1197]-t-te-[1250] [666] de la diplomatie. Je maintiens le Pape à Rome avec mon armée. Je ne me mêle en rien du reste de ses États. Le roi de Sardaigne** n'accepte pas **la dicta[1216]re des Légations.** Tout ce qu'on dit **du Piémont est faux. Les peuples mécontents s'insurgent dès que la force matérielle** s'éloigne d'eux, sans qu'il y ait besoin de chercher **une cause étrangère** à ce mouvement.

I am much pained, in the midst of my work, to have to answer every […] of diplomacy. I am keeping the Pope in Rome with my army. I do not meddle at all in the rest of his States. The King of Sardinia does not accept the dictatorship of the Legations. Everything said about Piedmont is false. Discontented peoples rise as soon as material force withdraws from them, without any need to look for a foreign cause of this movement.

f27 · 23 June · Saint-Cloud (Empress → Emperor)

> **Je suis désolée de vous avoir fait de la peine. Ce n'était pas mon intention. Ne vous inquiétez pas du petit, il va à merveille.** J'écris aujourd'hui par la poste.

I am so sorry to have caused you pain. It was not my intention. Do not worry about the little one, he is doing wonderfully. I am writing today by post.

f29 · 23 June · Montechiaro, eve of Solferino (Emperor → Empress)

> J'ai reçu trois lettres de vous aujourd'hui. **La *longue* a *consolé* la peine que les autres m'ont faite. *J'ai brûlé ce matin celle que je vous avais* répond[u] du Prince. On est [735] : il faut y regarder à deux fois avant de faire de la peine à ceux qui aiment.** Dites au maréchal Randon de mettre **des extraits des rapports de Magenta dans [le] Journal militaire, le [633] [85] et quelques nominations des officiers [296] [1142] [1203] mentionnés. Je suis inquiet de la santé de notre fils ; dites-moi franchement comment il est. De Cotte était de service hier ; il se portait très bien, il a couché à ma porte, et à minuit, au moment où on lui apportait une dépêche, il est mort subitement.**

I received three letters from you today. The long one consoled the pain the others caused me. This morning I burned the one I had written you in reply about the Prince (alternative reading: "…I vouch for the Prince"). One is […]: one must think twice before hurting those who love. Tell Marshal Randon to put extracts of the Magenta reports in the *Journal militaire*, the […] and some appointments of the officers mentioned. I am anxious about our son's health; tell me frankly how he is. De Cotte was on duty yesterday; he was in perfect health, slept at my door, and at midnight, as a dispatch was being brought to him, he died suddenly.

f30 · 24 June · Saint-Cloud, before news of the battle (Empress → Emperor)

> Tout va bien ici. **Le petit va à merveille.** J'attends de vos nouvelles avec bien de l'impatience. **La mère de de *[228]-t-te demande* le *corps* du [565] et son fils le [162ʒ]. Le [1046] *dit harassé* de fatigue.**

All is well here. The little one is doing wonderfully. I await your news with great impatience. The mother of de [Cotte?] asks for the body of […] and her son […]. The […] says [he is exhausted?] with fatigue. This sentence is only partly read, and the manuscript has clerk corrections at this point.

f32 · 24 June · Cavriana, evening of Solferino (Emperor → Empress)

> Grande bataille et grande victoire… pris beaucoup de canons, de drapeaux et de prisonniers. **Pertes de [274] sans [163] [1142]-se.** Autres détails impossibles…

The coded casualty line is only partly read: "Losses of […] without […]".

f35 · 25 June · Cavriana (Emperor → Empress)

> Impossible de donner des détails sur la bataille d'hier. **Tout [le] monde était mort de fatigue. L'ennemi s'est retiré cette nuit.** J'ignore le nombre précis de canons… La bataille prendra le nom de Solferino.

Everyone was dead tired. The enemy withdrew during the night.

7 Corroboration, novelty and what is new

7.1 External check: the death of General de Cotte

The last coded sentence of f29 was decoded before any source on it was consulted, with the name only partly read (CO-T-TE). A search of printed accounts then found it. Bazancourt's official-style chronicle, published in 1860, describes General de Cotte, aide-de-camp to the Emperor, in the following terms:

- he was on duty with the Emperor;
- around midnight he was reading newly arrived dispatches;
- he suddenly collapsed and died.

Bazancourt dates this to 23 June 1859 at Montechiaro (Bazancourt 1860).

Detail	Telegram f29 (decoded)	Bazancourt (1860)
Person	De Co-t-te	General de Cotte, aide-de-camp
Duty	"était de service hier"	on duty with the Emperor
Time	"à minuit"	about midnight
Circumstance	"au moment où on lui apportait une dépêche"	reading dispatches just brought in
Outcome	"il est mort subitement"	collapsed and died

Detail	Telegram f29 (decoded)	Bazancourt (1860)
Place and date	sent from Montechiaro, 23 June	Montechiaro, 23 June

This is an independent test of the key: the event is in print, but the telegram is not. Bazancourt does not quote this or any other coded telegram.

7.2 Prior publication

We found no earlier decipherment or publication of the coded text. We checked:

- the DECODE historical-cipher database;
- Tomokiyo's *Cryptiana* site and blog;
- the cyphersolver project;
- the 1870–77 editions of the *Papiers et correspondance de la famille impériale* (Tuileries papers);
- Hauterive, *The Second Empire and its Downfall*;
- Bazancourt (1860) and the 1862 Dépôt de la guerre official history of the campaign;
- web searches on the distinctive decoded sentences.

We did not consult the Archives nationales (400 AP, imperial family papers) or the Alba family archive in Madrid, which holds part of Eugénie's family correspondence. Either could contain contemporary decodes. Absence of prior publication is therefore "not found", not "excluded".

7.3 What is new

Several things in these telegrams were already known from the clear text and printed histories: the victory at Solferino, the naming of the battle, Niel's promotion to marshal, the Austrian withdrawal and the Emperor sleeping in the room where Franz Joseph had breakfasted. We do not claim these.

The coded passages add, as far as we can find, previously unpublished text:

- **A private exchange of 23 June.** Eugénie apologises for having hurt him and reassures him about their son. On the eve of Solferino he answers that her long letter consoled him, that he burned a reply (tentative reading), and that "one must think twice before hurting those who love".
- **A political statement of 19 June.** He keeps the Pope in Rome, does not meddle in the rest of the Papal States, and says Victor Emmanuel does not accept the dictatorship of the Legations. Uprisings, he says, need no foreign cause.

- **An instruction to Marshal Randon.** Randon is to publish extracts of the Magenta reports and some appointments in the *Journal militaire*.
- **Personal detail.** This covers anxiety over the Prince Imperial's health and the Emperor's own account of de Cotte's death. It also covers the Milan scene: priests kissing his hands, women kneeling, and a shortage of bread.

8 Limitations and open problems

Twenty-five tokens (22 distinct groups) are unread. Seven open f5; four form the coded casualty line of f32; the rest are single words in f19, f29 and f30.

- **1216 in DI-C-TA-[1216]-RE.** *Dictature* needs *tu*, and 1316 sorts exactly where *tu* would (between *trouv* 1312 and *u* 1318). The manuscript reads 1216, so this is most likely a one-digit slip by the encoder or clerk.
- **228 in f30.** Group 248 is *co* (f29, CO-T-TE). 228 is probably a slip for 248, giving "la mère de de Cotte". The rest of that sentence is weakly read.
- **1325 + 751 in f17.** "Nous espérons [1325] [751] sur la Chiese" must mean "demain" in sense. But the groups read *une* and *main*, and 1325 cannot be *de*. This is unresolved.
- **512.** It reads *faux* in f19 and must mean *faut* in f29. The book may file the homophones under one entry.
- **The ʒ list.** The separate list of proper names is inferred from four groups. Its extent is unknown.
- **f29, "répond[u] du Prince".** Two readings are possible: "the reply I had written you about the Prince" or "I vouch for the Prince".
- **Transcription.** A few manuscript groups are uncertain (1210 in f9; the f30 corrections).

The tiers are judgements, not probabilities. Probable readings rest on one context each, and a second sample of code-E traffic would test them. The language model encodes our corpus's biases toward formal military and court French.

Appendix: the recovered key

All 232 groups with a reading, in code order. "Uses" counts occurrences in the twelve telegrams; ʒ marks the suffixed groups (§3.3). Syllables and endings are given as used.
